

Management Report

RISK MANAGEMENT

With new digital solutions,
Banco CTT raised convenience
and quality of interaction.

4.1 Risk Management

The risk management system is part of the Group's internal control system (SCI), creating an appropriate control environment in which the Group carries out its activities, within the limits of its Risk Appetite Statement (RAS).

The risk management system delineated by the Banco CTT Group is based on a number of concepts, principles and rules, and on an applicable organisational model adjusted to Group, respecting its regulatory framework. The risk management model covers five essential stages, namely: identification, assessment, response, monitoring and reporting of risks.

In carrying out its activity, the Group is exposed to various types of risk arising from both external and internal factors, mainly depending on the characteristics of the market in which it operates.

The risk strategy is reviewed annually and defines the qualitative principles, rules and the quantitative rules and limits for the management of the different risks arising from the Group's activity. These are formalised in its RAS, presenting the risk appetite framework for the business growth of the Banco CTT Group in the next 3 years of activity.

The Group's risk management and internal control policy aims to maintain an adequate relationship between its own funds and the activity developed, as well as the corresponding risk profile assessment / return by line of business.

The risk management policy also seeks to support the decision-making process, thereby enhancing the Group's short and long-term capability to manage the risks to which it is exposed and enabling clear communication on how business risk should be managed, in order to create the basis for a solid operational environment.

In this context, it is important to monitor and control the main types of risks faced by the Group's activity.

The monitoring and management of risk in each area is based on the risk profile defined annually, in order to ensure that the pre-defined levels of risk appetite are complied with during the Group's activity.

In defining risk management processes, the Group adopts tools and methods that enable it to identify, assess, monitor and report risk both from an individual standpoint and in an integrated perspective. This ensures a comprehensive vision of the risks to which the Group is exposed, and an early understanding and appraisal of the potential impact these risks may have on the institution's solvency and liquidity.

Governance of Risk Management

The Board of Directors is responsible for defining and maintaining the Risk Policy, including the approval of its principles at the highest level, ensuring its compliance with the risk management model in force. The Board of Directors is also responsible for defining the Group's strategic orientation and the acceptable risk levels, ensuring that the business is conducted according to the instituted risk policy and that the material risks to which the Group is exposed stay at the predefined level.

The Audit Committee of Banco CTT, as a supervisory body, is responsible for overseeing the efficacy of the risk management system, the internal control system and internal audit system by way of internal audit duties and the External Auditor. It also acts as the risk committee, under the terms of and for the purposes established in Article 115-L of the RGICSF. The Audit Committee is responsible for assisting the Board of Directors in supervising the execution of the Bank's risk strategy by the Executive Committee. It also advises on risk appetite by presenting a corrective plan to the Board of Directors, whenever necessary, accessing information on the Bank's risk situation and, if necessary, accessing the risk management function and external expert advisers.

In order to make the control of the Board of Directors' strategic decisions more efficient, as well as the preparation of those decisions, specific committees have been created, with recurring meetings for risk management purposes which, in line with the Board of Directors' decisions, perform an important role in the management and control of financial and non-financial risks.

These Committees are responsible for the definition and execution of the risk management criteria and instruments, capital allocation, liquidity management, management of non-financial risks, continuous monitoring and assessment of the efficacy of the internal control system, namely by monitoring the detected flaws and

events, as well as by monitoring the risks, with a view to supporting the Board of Directors on the related issues.

Risk management duties are operationally centralised in the Risk Department and are independent from the business units, consistently incorporating the concepts of risk and capital in the Group's business strategy and decisions.

The Risk Department is responsible for implementing the risk policies set out by the Board of Directors and ensuring the integrated management of risks to which the Group is or may become exposed, ensuring these are managed appropriately by the Group's various Departments within the established limitations. In addition, the Risk Department identifies and assesses risks, develops methods and metrics for risk measurement and monitors and controls the evolution of risk, while defining effective and adequate controls for the mitigation of risk. It is also responsible for reporting the relevant risks, preparing periodic and timely reports that enable a reliable assessment of risk exposure and identifying the implemented control procedures to manage these risks, supporting the decision-making process in the risk management area of the Group.

The main responsibility of the Compliance Department is the management of compliance and reputational risk.

This department independently promotes and controls the adoption of the best banking practices by all the Group's bodies and employees. It also ensures they comply with the ethical principles and internal and external standards that govern the Bank's activity not only to avoid any monetary or reputational losses that may arise from a breach thereof, but also to contribute to customer satisfaction and the long-term sustainability of the business.

In addition, the Compliance Department prevents the Group's involvement in criminal money laundering and the financing of terrorism, by monitoring the customer acceptance policy and the transactions performed by the customers, always notifying the competent authorities whenever there is cause for suspicion.

Internal audit duties are carried out by the Internal Audit Department. This department is integral part of the process of monitoring the internal control system, carrying out autonomous supplementary assessments of the controls made and identifying possible shortcomings and recommendations. All of this is documented and reported to the management body, thereby protecting the institution's value, its reputation and solvency.

Credit Risk

Credit risk is related to the degree of uncertainty of attaining the expected returns as a result of the inability either of the borrower (and guarantors, if any) or of the issuer of a security or of the counterparty to an agreement to fulfil their obligations.

As the Group's main activity is commercial banking, with special emphasis on the retail segment, the Bank offers simple credit products – mortgage lending and overdraft facilities associated to current bank accounts with salary/pension domiciliation – and specialised credit at the point of sale through the activity of 321 Crédito.

Furthermore, the Group is also currently exposed to credit risk from other activities, namely its direct exposure to credit risk from investments and deposits in other credit institutions, Eurozone public debt securities, debt instruments from other issuers (credit institutions and companies) and securities from credit securitisations of the factoring of the Portuguese tariff deficit.

The control and mitigation of credit risk is carried out through the early detection of signs of portfolio deterioration, mainly through early warning systems and the pursuit of appropriate actions to prevent risk of default, the remedying of actual default and the creation of conditions that maximise recovery results.

The Group considers that there is a concentration of risk when various counterparts are located in a common geographic region, develop activities or have economic features that are similar which affect their capacity to comply with contractual obligations in the event of significant changes in macroeconomic conditions or other relevant changes for the activities carried out by the counterparts. Banco CTT has defined and implemented limits of concentration to mitigate this risk.

The analysis of risk concentration is essentially based on geographic concentration and concentration in the economic sector in which the counterparts operate.

The exposure subject to credit risk by country and risk class are detailed in this section, portraying the increased geographic diversification of the Group's investments.

The activities developed by the counterparts show some level of concentration in investment in public debt products, namely in eurozone countries. However, this concentration is in accordance with the Group's policy on risk appetite and is part of the liquidity risk management performed by the Group.

Credit risk is quantified/measured on a monthly basis by assessing the impairments required to cover customer credit, resulting from the application of the collective and individual impairment model.

The Capital and Risk Committee, Audit Committee and Board of Directors regularly monitor the Group's credit risk profile, in particular with respect to the evolution of credit exposures and monitoring losses. Compliance with approved credit requirements and limits are also subject to review on a regular basis.

The following table presents information on the Group's exposures to credit risk (net of impairment and including off-balance sheet exposures) as at 31 December 2020 and 31 December 2019:

(amounts in thousand euros)

	2020	2019
Central Authorities or Central Banks	660,475	471,295
Regional governments or local authorities	5,043	-
Credit institutions	100,724	166,289
Companies	25,886	18,041
Retail customers	546,768	467,468
Loans secured by immovable assets	537,959	421,748
Non-performing loans	16,690	7,291
Other items	69,223	57,072
Risk Headings	1,962,768	1,609,204

The Banco CTT Group, according to its national matrix, has a pre-dominance of exposures with credit risk in Portugal, and at the reference date presented the following exposures by country:

Impairment Model

During the year 2020, the Group used an impairment model based on IFRS 9 requirements and the respective benchmark criteria of Banco de Portugal defined in Circular Letter 62/2018. Moreover, the model also takes into account definitions and criteria that have been published by the EBA.

The year 2020 was deeply marked by the pandemic caused by Covid-19 with great impact on economic activity. This unexpected and rapidly spreading emergence of Covid-19 required the implementation of measures and the adjustment of priorities, changing the focus on growth to a focus on defence and consequently on the reinforcement of preventive impairments to deal with expected adversities.

In addition to the legislative measures to support the economy already in force in Portugal, namely those provided for in Decree-Laws 10-J/2020, 26/2020 and 78-A/2020 of 26 March, 16 June and 29 September, respectively, which introduced an exceptional moratorium regime, adjustments were made to the impairment model in order to incorporate this potentially prolonged effect in time.

The recognition of impairment should be based on historical information. However, due to the absence of a historical record for some segments, namely mortgage loans, the Group bases its calculations on benchmarks of the 'Probability of Default' (PD) and 'Loss Given Default' (LGD) parameters of other national banks or rating agencies. Nevertheless, when existing, historical data will be used in the estimates of the model parameters.

The use of benchmarks has some pertinent implications:

- Banco CTT assumes that the data obtained at portfolio level for conversion of the parameters by stage of impairment assume distributions that it considers to be its expected mature portfolio;
- Potential particularities of Banco CTT, negative or positive, are not captured by these benchmarks;
- Banco CTT transforms annual PDs and LGDs into Lifetime Expected Losses using a survival rate methodology. The PD for each period of the instrument's life is multiplied by the Loss Giv-

en Default (LGD), which in turn is a function of the expected exposure in each period and the collateral existing in the operation. Finally, the Bank updates the expected value of all the periods considered.

For portfolios with a historical profile that enable the use of more sophisticated statistical models, in particular Car Credit, the portfolio is segmented by financial product and by purpose, being subsequently subdivided into operations with (asset-backed) and without associated collateral. A new segmenting, based on the various criteria presented in CC/2018/00000062, enable a division by stage which, in turn, can be subdivided into intervals of days in arrears – risk classes – into intervals of 30 days, from 0 to 90 days in arrears.

The main inputs used for the measurement of expected credit losses on a collective basis, obtained through internal models, and other relevant historical data, taking into account existing models adapted to the requirements of IFRS 9, include the following variables:

> Probability of Default (PD):

Probability of default represents the risk associated to the default of a particular operation throughout a particular time horizon. This parameter is used directly for the calculation of the expected credit loss (ECL) of operations in Stages 1 and 2, where, pursuant to IFRS 9, the period considered for calculation of the PD varies according to the Stage. Therefore, the period of 12 months should be considered for Stage 1 and the useful life of the oper-

ation for Stage 2. The dataset for calculation of PDs is composed of all the contracts of the risk class that, in the first observation of the selected interval, are in a regular situation. The calculation is made in terms of number of occurrences, per quarter, and by vintage in order to follow the macroeconomic indicators.

> Loss Given Default (LGD):

Loss given default represents the estimated loss of a particular operation after entry into default. This parameter is used directly for calculation of the expected losses of operations in Stage 1,2 or 3. LGD can incorporate two components:

- > Collateral LGD, which estimates recoveries via foreclosure on collateral;
- > Cash LGD, which estimates recoveries via other means (e.g. payments made by the debtor).

> Exposure at Default (EAD):

EAD represents the expected exposure in the event that the exposer and/or customer enters into default. The Group obtains the EAD values based on the current exposure of the counterparty and includes the loans that have not yet fallen due, periodic calculation of interest, overdue interest not annulled and overdue loans.

The Group considers the following main segments in the calculation of impairment:

Financial Assets	Retail Offer	Mortgage Loans	Consists of the Bank's mortgage lending offer which has residential real estate property as collateral, regardless of the degree of completion of its construction.
		Overdraft	Includes the Bank's overdraft facilities and credit overrunning.
		Auto Loans	Includes the offer of used motor vehicle credit with reservation of ownership of 321 Crédito.
	Sovereign Debt		Eurozone public debt securities and exposures obtained through the credit assignment contract.
	Corporate		Deposits and investments in other credit institutions, other financing granted to other credit institutions and corporate debt securities.
	Other		Various legacy portfolios of 321 Crédito in run-off phase.

For segments whose lack of historical records implied the use of benchmarks, the reference parameters considered for calculation of impairment at the various stages, on the reporting date, are:

Stage		2020				2019			
		Mortgage Loans		Overdrafts		Mortgage Loans		Overdrafts	
		PD	LGD	PD	LGD	PD	LGD	PD	LGD
1	Performing	0.3%	29%	4.0%	53%	0.5%	18%	1.1%	35%

Moratoria

Decree-Law 10-J/2020 of 26 March established exceptional measures to protect the credit of families, businesses, private charities and other social economy entities, as well as a special scheme of personal guarantees from the State, within the scope of the Covid-19 pandemic.

In the course of 2020, the said regulation was amended by Law 8/2020 of 10 April, Decree-Law 26/2020 of 16 June, Law 27-A/2020 of 24 July and Decree-Law 78-A/2020 of 29 September.

With the various legislative changes, the end of the moratorium period, initially scheduled for September 2020, was extended until September 2021. The legislative changes also allowed for the extension of the deadline for customers to formalise moratorium requests. The conditions of access and the types of credits covered have also been changed. The measures provided for in the legisla-

tion described above – Public Moratoria –, materialise in the granting of a grace period for principal or principal and interest to debtors of credit agreements.

In addition to the Public Moratorium, ASFAC – Association of Specialised Credit Institutions – created the ASFAC Private Moratorium, which established exceptional measures to support and protect families resulting from the financial impacts of the pandemic caused by Covid-19, similar to those provided for in the Public Moratorium and applicable to 321 Crédito's motor vehicle credit portfolio.

In accordance with the EBA Guidelines on reporting and disclosure of exposures subject to measures implemented in response to the Covid-19 crisis (EBA/GL/2020/07), the following presents – as at 31 December 2020 – the gross exposures and impairment of contracts with moratoria in place:

(amounts in thousand euros)

	GROSS CARRYING AMOUNT							
	PRODUCTIVE				NON-PRODUCTIVE			
	Of which: exposures subject to restructuring measures	Of which: instruments with significant increased credit risk (*)			Of which: exposures subject to restructuring measures	Of which: low probability of payment that is either not due or past due for ≤ 90 days		Entries for non-productive exposures
Loans and advances subject to a moratorium	40,390	40,041	-	821	349	-	304	276
of which: households	31,118	31,118	-	-	-	-	-	-
of which: secured by residential property	31,112	31,112	-	-	-	-	-	-

Operational Risk

Operational risk arises from the probability of losses derived from the inadequacy or failure of internal procedures, systems, people or external events.

The operational risk management framework is a fundamental factor for risk management and control, with the continuous development of a strong risk culture and management being essential for its proper implementation.

Duly documented concepts, principles and practices have been endorsed for the management of this type of risk, which are reflected in control mechanisms subject to continuous improvement.

The goal of controlling and managing operational risk is geared towards detecting, assessing, reporting and monitoring this risk.

Governance of operational risk management

The operational risk management framework is based on a model of 3 lines of defence where the first line of defence, composed of all the Bank's employees and Process Owners, is primarily responsible for daily risk management, in conformity with the policies, procedures and controls that are defined.

The second line of defence ensures the monitoring of operational risk, advises and supports the first line of defence in identifying risks and controls associated to the various existing processes. The Control Functions (Risk and Compliance Departments) play a preponderant role in the second line of defence.

The third line of defence is ensured by Internal Audit, which is responsible for independently examining and assessing the adequacy and effectiveness of policies, processes and procedures that support the internal governance and risk management system by carrying out effectiveness tests on the implemented controls.

The approach to operational risk management is supported by the structure of end-to-end processes. A vision that cuts across all operational areas within the organisation's structure is deemed the most appropriate approach to perceiving risks and estimating the impact of corrective mitigation measures. The framework has a structure of processes that is adjusted in terms of the business' evolution.

Process Owners are responsible for defining the processes from an end-to-end perspective, ensuring the effective adequacy of controls, reporting the operational risk events detected by its database processes, identifying and assessing the risks and controls of processes through active participation in RSA (Risk Self-Assessment) exercises, detecting and implementing appropriate measures to mitigate risk exposure and monitor key risk indicators (KRIs) and performance indicators (KPIs) of processes.

In the operational risk management framework, the main operational risk management instruments involve the identification and recording of operational risk events, the process of self-assessment of risks and controls (RSA) processes and the identification and quantification of Key Risk Indicators (KRIs). These procedures enable the detection, assessment, monitoring and mitigation of operational risk, thereby ensuring minimum losses associated to this risk and promoting the effective management of operational risk.

Collection of operational risk management events

The recording of operational risk events is the instrument used to quantitatively measure the historical exposure to operational risk events, and to underpin subsequent analysis to the real efficacy of the existing controls.

This activity essentially consists of the use of a dynamic repository of all the risk events that may have occurred, supported by procedures that ensure the effective analysis of the most relevant events, whether due to their financial impact, their recurrence or other pertinent feature.

Therefore, the analysis of loss and near-miss events provides indications on the main risks and enables determining whether any failures are isolated events or systemic. On the other hand, this practice accelerates the identification of emerging events, enabling rapid response.

The detection and reporting of operational losses is the responsibility of all the employees, while Process Owners have a decisive role in recording and describing operational risk events, which includes detailing the respective cause and effect, quantifying the loss and describing the risk mitigation action plans.

The Risk Department is responsible for the recording and description of operational risk events in the database, and validating and monitoring them. Furthermore, the department monitors and identifies shortcomings in the processes and respective mitigation actions.

Fraud Risk

Operational risk includes events or risks related to fraud, for which a fraud risk management policy has also been approved. This policy formalizes the way in which fraud is addressed concerning its prevention, detection and investigation. Fraud can materialise through different channels, both via products and services and through the different entities with which the Group interacts. In this regard, the main types of fraud are considered to be fraud in the contracting of credit products, accounting fraud, online fraud, card fraud, fraud related to operations, fraud on the part of suppliers or service providers, and fraud of partners.

The defined fraud management model covers various stages, namely prevention, detection, investigation and monitoring. This approach to fraud management, at an initial stage primarily focuses on prevention and detection, in terms of definition of processes, procedures and controls, as well as the implementation of tools. These phases contribute to the effectiveness of the fraud management process, namely in the prevention stage, thereby minimising the impact of any losses associated with fraud risk events.

Compliance Risk

Compliance risk is defined by the Basel Committee on Banking Supervision as the risk of an institution incurring legal and/or regulatory sanctions and financial or reputational damage due to failure to comply with laws, regulations, codes of conduct and best practice. The prevention and mitigation of the Banco CTT Group's compliance risk involves the involvement of the management and supervisory bodies and the control functions, in particular the Group's Compliance Function, in decision-making processes, particularly those related to product governance. The management of this risk in the Group is also intrinsically associated with the promotion of a culture and conduct based on ethical values and socially responsible behaviour, also ensuring the alignment of incentive policies with the best interests of customers.

In the pursuit of this objective, the Banco CTT Group has adopted an internal governance model that promotes the effectiveness of its internal control system, namely through the independent and influential performance of the control functions, the implementation of policies and regulations that prevent conduct risks, including the definition of remuneration and incentive policies that prevent the occurrence of conflicts of interest in the sales process.

To guide and formalise the management of this risk, the Bank, as the parent company, has defined a Policy and a Procedures Manual, which stipulate the fundamental principles of compliance, the objectives, players and responsibilities in the field of compliance control and the principles that must be respected by its employees.

As the Group operates in a highly regulated sector, it is crucial that it have an efficient and comprehensive compliance risk management cycle that reduces any possible penalties arising from breaches of legal and regulatory requirements. In this way, and in line with its General Risk Management and Internal Control Policy, the Bank defined the following stages in its cycle:

> **Risk strategy definition:** Considering that the (residual) compliance risk to which the Group is exposed should be low, avoiding the application of serious or very serious administrative offences, the management of this risk follows the following principles: Existence of an independent Compliance Function; Offer of products and services subject to a prior analysis of compliance risk; Variable remuneration/incentive models that reduce conflicts of interest; Implementation of control actions in the areas of greatest inherent risk; Mandatory initial training of employees on

compliance and PBCFT issues; Conservative client acceptance policy and with enhanced levels of diligence on clients and operations with a high risk of BCFT;

> **Identification and evaluation:** In the case of compliance risks, this stage involves identifying all the compliance requirements that the Group Bank should fulfil, whether derived from applicable legal and regulatory provisions or from rules contained in codes of conduct, policies or procedures defined internally. The Compliance Function is responsible for systematising the "compliance requirements" and the risks associated with them; Likewise, the potential risks associated with the "compliance requirements" identified must be assessed so that their inherent and residual risk is known.

> **Response:** Once the residual risk has been assessed, action priorities should be defined, together with the areas, in order to mitigate the risks that are above the defined risk appetite.

> **Monitoring and reporting:** compliance with requirements is monitored on an on-going basis by the Compliance Function, ensuring that any detected breaches are identified and acted upon in a timely fashion. On the other hand, the overall state of the Bank's compliance with the legal and regulatory requirements is periodically reported to the supervisory and management bodies.

Compliance risk management involves continuous monitoring of the regulatory initiatives with the greatest impact on the Group, with emphasis, in 2020, on the regulatory projects associated with the implementation of the new legislation on the prevention of money laundering (Law 58/2020), as well as the new regulatory framework for governance systems, internal control and organisational culture, through Notice 3/2020 and Instruction 18/2020.

The Group's Compliance risk management also involves the preventive action by the Compliance Function in processes considered critical for this purpose, in particular, sign-off on new policies and procedures, relevant communications with customers, pre-contractual or contractual documentation or advertising materials. Likewise, the launch of new products/services or the significant change of existing products/services implies the conduct of risk assessments in which potential compliance or reputational risks are identified, for which actions or controls shall have to be implemented to enable their mitigation whether at a stage before the launch of the product or after the beginning of its marketing. The follow-up of the handling of customer complaints also merits special attention, not only with a view to the identification of compliance risks, but also to ensure that customer complaints were properly addressed.

The management of compliance monitoring actions and testing of first line controls completes the compliance risk management cycle. In this regard, particular note should be made of the monitoring, in 2020, of the process of approval of new products and services, of the procedures of control of transactions with related parties, and of the remuneration policies.

Market Risks

Market Risk broadly means any loss arising from an adverse change in the value of a financial instrument as a result of a variation in interest rates, exchange rates, share prices, prices of goods or real estate, volatility and credit spreads.

The Group does not have a trading portfolio, with the exception of a derivative with a residual valuation that was acquired by one of the securitisations included in the consolidation perimeter, and almost all of its investment portfolio is recorded as financial assets at amortised cost and residually as financial assets at fair value through other comprehensive income, with the main risk arising from its investments being credit risk rather than market risk.

To limit any negative impacts from turmoil in the market, sector or issuer, the Group defined a number of limitations to manage its own portfolio in order to ensure that the risk levels incurred in the Group's portfolio comply with the predefined levels of risk tolerance. These limits are stipulated at least annually and are regularly monitored by the Capital and Risk Committee, Audit Committee and Board of Directors.

Interest Rate Risk

Interest rate risk is the risk of any loss of an economic value on balance sheet items that are interest rate-sensitive due to changing interest rates.

One of the main instruments used to monitor interest rate risk on the balance sheet is the repricing gap on assets and liabilities susceptible to changes in interest rates. This model groups variation-sensitive assets and liabilities into fixed timeframes (maturity dates or first interest rate review dates when the interest rate is indexed, or behavioural when appropriate), from which a potential impact on the Group's financial margin and economic value, resulting from interest rate variations, is calculated and for which the Group has defined specific tolerance limits.

The repricing gap reports are prepared monthly and are an essential tool in defining the investment strategy for each cycle in order for the Group to ensure that time mismatches between assets and liabilities are aligned at all times with the appetite stipulated in the risk strategy.

Up to date, the Group has been managing interest rate risk in its balance sheet structurally by using natural hedges in the composition of the investment portfolio, without resorting to derivative instruments.

Liquidity Risk

Liquidity risk is the risk of the Group's potential inability to meet its funding repayment obligations without incurring in significant loss-

es, due to more onerous financing conditions or the sale of assets under market values.

The Group is exposed to the liquidity risk inherent to its business of transforming maturities, lending in the longer-term (essentially in Mortgage Lending) and borrowing liquidity, primarily in the form of deposits, where prudent management of liquidity risk is thus crucial.

Management Practices

The Banco CTT Group has established a liquidity risk management structure with clearly identified responsibilities and processes in order to ensure that all participants in liquidity risk management are perfectly coordinated and that the management controls are effective. Overall, the liquidity risk management strategy is entrusted to the Board of Directors, which delegates it to the Executive Committee, and is carried out by the Treasury Department, based on constant vigilance of exposure indicators, being closely monitored by the Capital and Risk Committee.

The Capital and Risk Committee is responsible for controlling liquidity risk exposure, by analysing liquidity positions and assessing their conformity with the applicable regulatory rules and limitations, as well as with the goals and guidelines defined by the Group.

The Treasury Department of Banco CTT is responsible for ensuring the cash flow management and necessary short-term liquidity levels. In particular, it is responsible for holding High Quality Liquid Assets (HQLA), and implementing the medium and long-term funding plans through cash management and interbank relationships, ensuring compliance with the established liquidity risk limits, minimum cash reserves, position limits and other regulatory ratios or those defined by the Executive Committee or Board of Directors.

The Risk Department is responsible for identifying, assessing, controlling and monitoring the Group's liquidity risk, ensuring its management within the risk appetite defined by the Board of Directors, supporting the definition of liquidity limits, ensuring the ongoing monitoring of its compliance, supporting the Capital and Risk Committee in the definition of key risk indicators (KRIs), and monitoring their evolution.

The different assets are constantly monitored as regards their eligibility to be involved in transactions, duly limited by what can be undertaken in each market.

As regards structural liquidity, the Group draws up a monthly liquidity report that takes into account not only the effective maturity date of the different products, but also their behavioural maturity, through which structural mismatches are determined for each time bucket.

In this context, in addition to the internal analyses for monitoring this risk (e.g. ongoing assessment of liquidity gaps and/or dura-

tion, analysis of the composition and availability of assets, etc.), the Group also adopts the Liquidity Coverage Ratio (LCR) and Net Stable Funding Ratio (NSFR) quantifications, regularly monitoring their evolution and anticipating potential impacts. The Group also monitors additional liquidity monitoring metrics (ALMM) which enable checking for liquidity mismatches and the Group's capacity to offset negative mismatches (outflows greater than inflows).

The LCR seeks to encourage bank resilience to short-term liquidity risk, ensuring it has sufficient high quality net assets to survive a severe stress test for 30-day period.

The implementation of NSFR seeks to ensure banks maintain stable financing for their off-balance sheet assets and operations for a 1-year period.

Due to having higher granularity than the LCR (30 days), the ALMM enable greater control over the liquidity mismatch, taking into account the contracted outflow and inflows, and also enable knowing the concentration of counterbalancing capacity.

Analysis of Liquidity Risk

The Liquidity Coverage Ratio (LCR) reached a comfortable figure of 1.066% (1.896% at the end of 2019), significantly higher than the minimum requirements, reflecting the Group's liquidity management, namely its investments, during 2020.

The Banco CTT Group continues to follow all the legislative changes in order to comply with the regulatory obligations, namely in relation to the Capital Requirements Regulation (CRR) – Liquidity Coverage Ratio (LCR) and Net Stable Funding Ratio (NSFR).

As at 31 December 2020, the ALMM shows a positive liquidity mismatch (difference between contracted outflows and inflows) of 170,407 thousand euros.

Additionally, this positive liquidity mismatch is reinforced by financial assets and reserves at the Central Bank of close to 1,020,108 thousand euros.

Strategy Risk

Strategy risk is the probability of the occurrence of negative impacts on results or capital, arising from inadequate strategic decisions, poor implementation of decisions or inability to respond to changes in the surrounding environment or changes in the Group's business environment.

The Group actively manages its strategic risk through periodic reviews of its Business Plan according to the evolution of the actual business, changes of economic and competitive circumstances and market conditions, having constant concern with its level of capital and the risks taken in its strategic decisions and the estab-

lished capitalisation plan. Its monitoring is ensured regularly by the Executive Committee, Audit Committee and the Board of Directors through the follow-up of budget deviations.

IT Risk

Information systems risk refers to the probability of the occurrence of negative impacts on results or capital, as a result of the information systems' inadequacy in adapting to new needs, their inability to prevent unauthorised access, to guarantee data integrity or to ensure business continuity in cases of failure, as well as due to the pursuit of an inadequate strategy in this area.

The main objective of the Banco CTT Group's information security strategy is to ensure the implementation of adequate and relevant protection measures to meet business objectives, while simultaneously safeguarding the Group's interests and the trust of its customers and employees. The Information Security framework, defined and adopted by the Data Security and Protection Department, is based on the following areas of action: governance and compliance, cybersecurity, data protection, identity and access management, vulnerability management, coordination and response to security incidents, and systems development, maintenance and acquisition.

Additionally, the Banco CTT Group has implemented a business continuity plan, periodically tested, reviewed and improved, based on risk analysis and in compliance with legal and regulatory requirements.

The Business Continuity Plan aims to formalise and promote the adoption of adequate response procedures that, in the event of a disaster, ensure, both from an organisational and technological point of view, the continuity of the Bank's processes and the mitigation of any losses involved.

The Business Continuity Plan includes, in an integrated manner, an operational continuity component and a technological recovery component, and in each plan the adjacent continuity solutions are described, as well as the respective recovery/contingency operation procedures and the Business Continuity Plan teams involved.

In addition, the Technology and Operational Efficiency Committee monitors the levels of service response and resolution of both the internal teams and the main suppliers and partners, and the level of availability of the main systems.

Information Systems Risk is managed by the Information Systems Department, IT Security Risk is managed by the Data Protection and Security Department and the Business Continuity Plan is under the responsibility of the Risk Department.

4.2 Board of Directors' Statement – Article 435(1)(e) of the CRR

It is hereby stated that the institution's risk management measures and the implemented risk management systems are appropriate to the Bank's risk profile and strategy.

4.3 Board of Directors' Statement – Article 435(1)(f) of the CRR

Concise risk appetite statement:

The Banco CTT Group carries out its activity in a prudent and sustainable manner. The established goals for the business are, at any given time, limited by the risk tolerance levels defined according to the Group's long-term sustainability and profitability.

The risk tolerance levels are defined in the Risk Appetite Statement (RAS) of the Group, with this instrument being used in the Bank's management and decision-making process in its consolidated activity. The first and foremost objective of the RAS is to lead the Group, in general, and its governing bodies, in particular, to reflect on the Bank's risk positioning. Accordingly, the RAS is reflected in a continuous and ever present concern in the different strategic planning and business cycles, being one of the core components for the definition of the Group's growth and profitability goals, and defines the main qualitative principles and quantitative limits for the management of the different risks arising from the activity, thus conditioning the criteria on decision-making and management operatives of the different risks.

The RAS is divided into two main components: a) Governance Model that, based on the General Policy on Internal Control and Risk Management, assigns responsibilities to the different corporate bodies and structural units; and b) Risk Assessment and Indicators

that include an assessment of the different risks, identification of the material risks and definition of their limits.

The RAS is reviewed at least annually, both with regard to the assessment of risks and identification of those that are material and with regard to the choice of relevant indicators and the established limits.

The 2021-23 version of the RAS, approved by the Board of Directors in December 2020, includes 18 indicators as limits that the Group considers essential for its sustainability in various aspects of its business: capital, liquidity risks, operational, credit, interest rate, reputational, compliance and information systems management.

In the last 2 years, the Banco CTT Group presented the following consolidated risk and liquidity indicators:

	Dec/20	Dec/19
Common equity tier 1 ratio [CRR]	16.8%	19.1%
Total own funds ratio [CRR]	16.8%	19.1%
Leverage ratio [CRR]	6.7%	7.7%
Liquidity coverage ratio [CRR]	1,066%	1,896%
Net stable funding ratio [CRR]	170%	162%
